

# Tangent Devices are making Waves!

## Introducing our new panel: The Wave

A mouse or pen and tablet is not always the fastest or easiest way to use your colour grading software. Wouldn't it be better if you had something real to get a hold of? Well, the Wave allows you to do just that.

### **Affordable technology**

With the Wave, Tangent Devices brings a new level of affordability and quality to control surfaces. The design draws heavily on the experience gained from our highly successful CP100 and CP200 panel ranges. The Wave is not intended to replace these panels – it is just aimed at the more budget conscious user.

### **Superbly designed**

Stylish enough to look good in any grading suite and compact enough to be used for on-set grading, you'll find all the controls you'd expect from a colour grading panel without compromising on the essential ergonomics. The Wave features crisp, easy to read, cool-blue OLED displays and custom trackerball units based on a non-contacting optical pickup. With enough buttons and knobs to keep your most needed controls at your fingertips, the Wave will increase your productivity, leaving you to get on with what you're best at doing – being creative!

## SPECIFICATIONS

*All dimensions are in mm.*

Tangent Devices Ltd  
Crowbush Farm,  
Luton Road, Toddington,  
Bedfordshire, LU5 6HU, UK
